

## ACID CONCENTRATE DISTRIBUTION SYSTEM

### FEATURES:

- A virgin polyethylene tank with flat bottom complete with connections for fill, pump feed, and loop return.
- Piping, true union valves and pressure reducing valve are PVC schedule 80.
- Pump is a magnetic drive, medium head, poly design, with mounting frame.
- All stainless steel pressure gauge and PVC needle valve for flow and pressure regulation.
- Lightly pressurized distribution and recirculation provides steady, consistent delivery, and decreases air lock potential.

### STANDARDS:

- FDA 510K / ISO 13485 Registered Medical Device
- Health Canada Medical Device License 82249

| Model   | Description                       | Tank Dimensions In. (W x H) | Shipping Weight Lbs. |
|---------|-----------------------------------|-----------------------------|----------------------|
| 00ASP   | Pump Assembly Only                | n/a                         | 25                   |
| 00AS130 | 130 Gallon Tank & Pump Assembly   | 23 x 76                     | 120                  |
| 00AS300 | 300 Gallon Tank & Pump Assembly   | 35 x 85                     | 135                  |
| 00AS500 | 500 Gallon Tank & Pump Assembly   | 46 x 76                     | 155                  |
| 00ASRF  | Acid Remote Fill Station Assembly | n/a                         | 20                   |

**Note: AmeriWater recommends distribution loop to be installed using ½" OD polyethylene tubing to minimize bacteria growth.**
