

## BIOTROL RO MEMBRANE PRESERVATIVE - MODEL 95810130

### DESCRIPTION:

When portable reverse osmosis units are out of service, the concentrated dissolved solids, organics, and bacteria foul the surface of the membrane and create an environment for bacterial growth.

AmeriWater's BioTrol was developed as a preservative intended for use in removing biological and other organic foulants while the RO is in storage in-between uses.

### FEATURES:

- Effective maintenance solutions for thin film composite membranes
- Effective short-term storage of up to two weeks
- No adverse effects with repeated use
- Safe for rinsing directly to the drain
- Simple to verify removal from the RO using conductivity (uS) and pH
- Safe to handle with no toxic vapors or special OSHA regulations

In the AmeriWater MRO Series reverse osmosis units, liquid BioTrol can be added to the disinfection jug and quickly drawn into the unit for cleaning and storage.

BioTrol is not a biocide and is not intended for use in hemodialysis machines.

Product label includes an expiration date to ensure that the chemical is used at its most effective state. The shelf life of the preservative is two years.

Packaged as four (4) one gallon bottles.
